## METHODOLOGY

**How Picks Are Generated (v2.0 - Full Context Model):**

**1. Data Collection**

- Player game logs from last 30 games (not 15) for statistical validity
- Live betting lines from major sportsbooks via The Odds API
- Team defense ratings, pace data, and schedule info

**2. Base Projection (Mean Reversion Model)**

- $40\% \times \text{Last 5 games} + 35\% \times \text{Last 10 games} + 25\% \times \text{Season avg}$
- Incorporates mean reversion (hot streaks regress, cold streaks recover)

**3. Contextual Adjustments**

- Home/Away splits (player-specific boost/reduction)
- Back-to-back: -7% reduction when fatigued
- Extra rest (3+ days): +3% boost
- Minutes trend: adjusts if recent minutes differ from average

**4. Vig-Adjusted Edge**

- Calculates implied probability from odds (accounts for juice)
- Edge = Our estimated probability - Breakeven probability
- Example: -130 odds requires 56.5% to break even

### 5. Confidence Score (Multi-Factor)

- 40% consistency (low variance = higher confidence)
- 30% sample size (more games = more confidence)
- 30% agreement (historical hit rate in same direction)
- Capped at 85% - no overconfidence

### 6. Minimum Sample Sizes

- Points: 10 games | Rebounds: 12 | Assists: 15
- 3-Pointers: 20 games (high variance stat)

### 7. Correlation Filtering

- Removes redundant picks (e.g., if both Points and PRA picked, keeps best)
- Prevents over-exposure to single player outcomes
