• REBOUNDS: 22 picks
• THREES: 18 picks
• ASSISTS: 12 picks
• PRA: 6 picks

METHODOLOGY

How Picks Are Generated (v2.0 - Full Context Model):

1. Data Collection
• Player game logs from last 30 games (not 15) for statistical validity
• Live betting lines from major sportsbooks via The Odds API
• Team defense ratings, pace data, and schedule info

2. Base Projection (Mean Reversion Model)
• 40% × Last 5 games + 35% × Last 10 games + 25% × Season avg
• Incorporates mean reversion (hot streaks regress, cold streaks recover)

3. Contextual Adjustments
• Home/Away splits (player-specific boost/reduction)
• Back-to-back: -7% reduction when fatigued
• Extra rest (3+ days): +3% boost
• Minutes trend: adjusts if recent minutes differ from average
• News Intelligence: real-time injury reports, GTD status, minutes restrictions

4. Vig-Adjusted Edge (Conservative Model)
• Calculates no-vig market probability from BOTH over and under odds
• Our probability = market probability + adjustment (capped at ±15%)
• Adjustment based on: historical hit rate edge + projection movement

- Edge = Our estimated probability - Breakeven probability
- Example: -110/-110 odds = 50% market, +5% adjustment = 55% our prob, +2.6% edge

5. Confidence Score (Multi-Factor)
- 40% consistency (low variance = higher confidence)
- 30% sample size (more games = more confidence)
- 30% agreement (historical hit rate in same direction)
- Capped at 85% - no overconfidence

6. Minimum Sample Sizes
- Points: 10 games | Rebounds: 12 | Assists: 15
- 3-Pointers: 20 games (high variance stat)

7. Correlation + Alt Line Filtering
- Removes redundant picks (e.g., if both Points and PRA picked, keeps best)
- Removes duplicate alt lines (e.g., UNDER 23.5, 22.5, 21.5 → keeps best)
- Prevents over-exposure to single player outcomes

KEY TERMS & DEFINITIONS

Edge (Probability Edge): The difference between our estimated win probability and the breakeven probability implied by the odds. A +5% edge means we estimate a 5% higher chance of winning than what the odds suggest. Example: If odds imply 52% breakeven and we estimate 57%, the edge is +5%.

Implied Probability: The breakeven win rate required by the odds. At -110 odds, you need to win 52.4% to break even after juice.

Market Probability: The no-vig (true) probability derived from both over and under odds.

Confidence: A measure of how consistent the player has been. Higher confidence means the player's stats have low variance and are more predictable. Capped at 85%.

Projection: Our predicted stat total, based on weighted recent performance with contextual adjustments (home/away, B2B, minutes trend).

Hit Rate: The percentage of recent games where the player exceeded/missed this line.

PRA: Points + Rebounds + Assists combined.

Trend: HOT = recent 5 games above season average, COLD = below average.

OVER/UNDER: The recommended bet direction. OVER means bet the player exceeds the line.
